SKILLS

- **Software & Suites:** DaVinci Resolve, Canva, CapCut, OBS Studio
- **Visual & Motion Graphics:** Fusion (Node VFX), Keyframing, Compositing
- **Audio & Sound Design:** Fairlight, Audacity, Audio Cleanup, SFX Mixing

EXPERIENCE

Freelancer — Senior Video Editor

2025 - PRESENT

Wedding & Event Highlights: Edited cinematic wedding recap videos and multi-cam event footage, syncing live vows and speeches with background music in DaVinci Resolve.

Documentary Storytelling: Structured long-form documentary cuts, weaving together interview audio, voiceovers, and B-roll to build engaging narratives.

Color & Audio Post-Production: Applied custom color grading for cinematic visual styles and cleaned up noisy dialogue using Fairlight audio tools

Cinematic Real Estate: Edited high-end interior & exterior property tours, applying smooth speed ramps and dynamic transitions in DaVinci Resolve to highlight key structural features for buyers.

PROJECTS

Documentaries — Lead Video Editor

Structured a non-linear narrative from hours of raw A-roll/B-roll footage, executing dialogue cleanup, multi-cam timeline synchronization, and Fairlight audio ducking for vocal clarity. **Implemented seamless J/L-cut transitions** paired with strategic B-roll overlay mapping to eliminate dead air and maintain narrative momentum during long-form interviews.

Wedding Events — Lead Video Editor

Constructed a fast-paced, emotion-driven narrative beat-synced to audio transients. Engineered a multitrack audio mix balancing spoken vows, ambient crowd noise, and music scoring with dynamic audio ducking. Applied a warm, golden-hour color grade with preserved skin tones across shifting outdoor and indoor lighting environments.

Real Estates — Lead Video Editor

Applied 3D planar camera tracking in Fusion to anchor dynamic spatial callouts directly into 3D interior space. Executed fluid optical-flow speed ramps between room transitions and balanced exposure variance across bright window views and shadowed interior spaces using local tone mapping.

Color Gradings — Lead Video Editor

Built a multi-node color pipeline to transform flat LOG/raw footage into cinematic visual assets. Applied primary exposure balancing, secondary chromatic qualifiers for skin-tone isolation, and temporal noise reduction. Integrated kinetic title cards, paper-tear texture overlays, and real-time split-screen before/after comparisons in Fusion.
